

Hamlin High School Animal Science students completed a fun **Tie-Dye Milk Lab** to explore the differences in fat content between different types of milk! 🧪

Using food coloring and dish soap, students observed how the colors moved and reacted in the milk to investigate which types had the highest and lowest fat content — all without tasting a single drop! 🥤🔬

This hands-on activity allowed students to make observations, compare results, and connect science to everyday dairy products. Who knew learning about milk fat could be so colorful and fun?! 🌈🐄
