🩸 DONATE IN DEWY'S MEMORY ❤️

Dewy had a blood condition called Alpha Thalassemia. Alpha Thalassemia is a blood disorder that reduces the production of hemoglobin. Hemoglobin is the protein in red blood cells that carries oxygen to cells throughout the body. He received 15 blood transfusions in 11 months, which helped keep him alive. For his funeral, his family did not ask for flowers. Instead, they wanted people to donate blood.

One donation. Three lives potentially saved.
